DIASTASYS

Diastasys was founded in 2007 with the vision to provide premier enterprise software solutions, and high-level services across the entrepreneurial spectrum of the Greek and International markets. Our specialized personnel are dedicated to design, develop and deliver integrated IT and Enterprise Software solutions in a results-oriented approach. Having extended Microsoft platforms, the end-products of our company encompass innovation, user-friendliness, new functionalities, and provide unprecedented added value to our customers' investments. We maintain a philosophy that is based on principles of quality, integrity, transparency, and team spirit.

DIFFERENTIATION

We design, develop and deploy vertical solutions by successfully implementing and delivering reliable software systems that will add value to our customers' business requirements. Our software products have been evolving by adopting state-of-the-art processes through: innovation, ergonomics, fast and accurate parameterization and continuous upgrading.

QUALITY

At the very core of our philosophy lies the commitment to the final goal: "Best-Fitting software systems that work!"
Our company constantly invests by recruiting professionals of high caliber and specialization in their area of expertise. Our staff is capable to lead, assist and support our customers in order to sustain their performance and financial stability. Having delivered a substantial number of different solutions for large enterprises and organizations, Diastasys has acquired a multi-faceted readiness and crucial know-how which has enabled us to carry out projects with high degree of complexity.

WE COMMIT TO SUSTAINABLE DEVELOPMENT

All our actions aim at achieving Excellence. Hence, we direct all our efforts to become the best by producing innovative solutions that offer added-value to our customers, thus making the most out of functional flexibility, as well as fast return of investment (ROI). We at Diastasys, encourage the creative spirit of our staff by cultivating the best working conditions dictated by justice and mutual respect.

All our actions aim at achieving excellence. WE BELIEVE IN OUR DYNAMIC GROWTH MODEL

- Embracing our staff members who generate value and lead the growth of our company,
- Aiming at our robust research and development (R&D) process that points to the enforcement of our competitive advantage, enabling to translate the current market requirements, while further exploring innovative technologies.
- Investing to strategic partnerships with leading enterprises in their business domain pondering on the incoming value for further development of Diastasys, as well as to the continuous improvement at both the level of products and the solutions our company provides,
- For our customers and our channel partners both locally and internationally, who consider us as a reliable long-term ally, and trust us for our business values, our ethical code, as well as our excellent staff members.

STRATEGIC PARTNERSHIPS

Diastasys is an official Microsoft Gold ERP Partner; a distinction which ascertains the high-level professional know-how of our staff in ERP technologies and implementations. Additionally, our company is a Microsoft Independent Software Vendor (ISV) for the development and distribution of Microsoft products, and reseller of Microsoft Dynamics NAV licenses. In this context, we provide related services of installation, parameterization and maintenance.

In the domain of Business Intelligence and M.I.S., Diastasys has partnered with Qlik, one of the most recognizable international players in this domain. Qlik is a renowned B.I. platform provider for the design of applications that support the crucial "from data to actionable knowledge" processes. It contributes to accurate decision making tasks, while responding to compliance issues specific to every vertical market. Our customers rely on a powerful decision making and compliance platform that empowers them to focus on profitable business decisions.

Diastasys upgrades and extends its solutions' functionality with the development of applications for mobile questionnaires. It responds to urgent requirements that mandate an increasing use of mobile devices like: hand-held, smartphones, etc. in an effort to extend systems' functionality in a wireless environment. Our mobile applications are based on the platforms: Microsoft Windows Mobile and Android, which are considered very popular operating platforms used by an increasing number of smartphones among millions of mobile device-owners.
